COMMVAULT®

INTRODUCTION

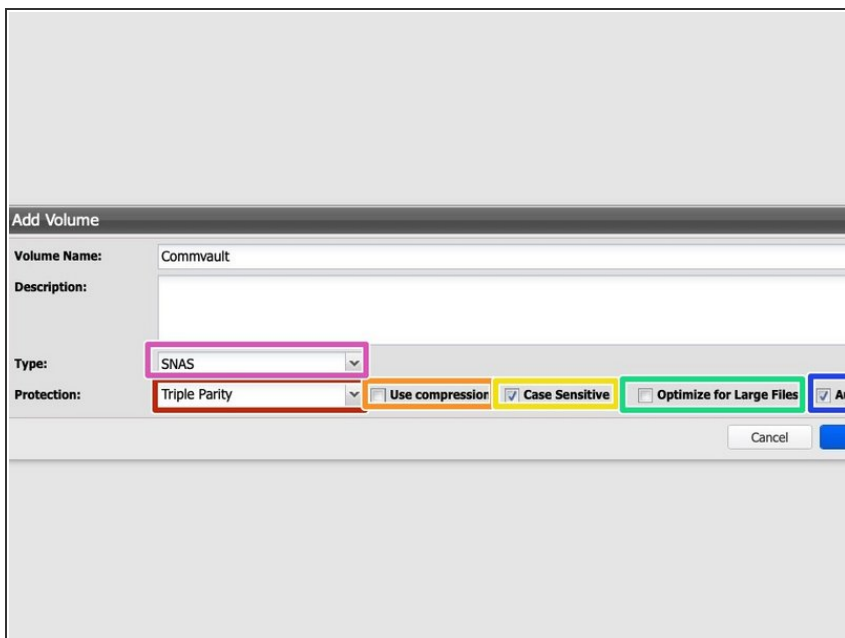

This guide describes the necessary steps to setup up the Silent Brick System as a Commvault Backup & Recovery NAS target.

Step 1 — Create share user

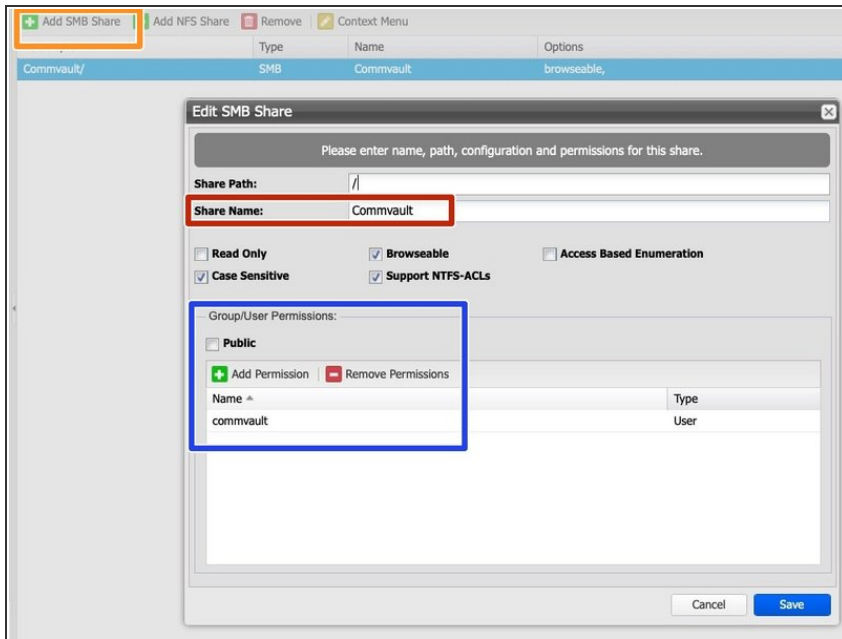

- Go to the SMB section of the user interface
- Depending on your requirements...
 - Join the Silent Brick System to the active directory
 - Or create a local user account

Step 2 — Create SNAS Volume

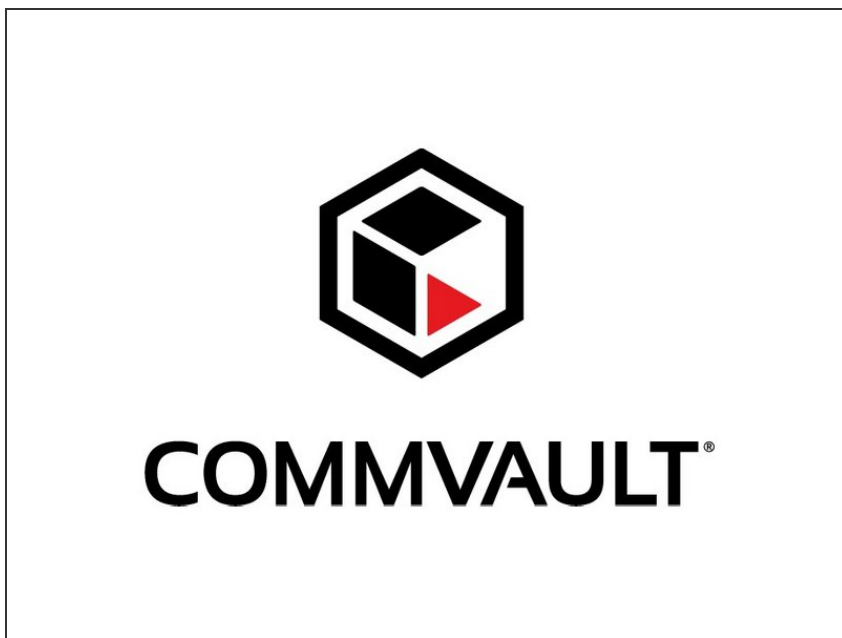

- Switch to the Volumes section of the User Interface
- Create a new SNAS Volume
 - Type: SNAS
 - Protection: As desired
 - **Compression: No**
 - Case Sensitive: Yes
 - **Optimize for Large Files: No**
 - Disable **Auto Audit** if you are not storing long-term backups in this volume.

Step 3 — Add share

- Select your Volume and choose the "Shares" Tab
- Create a new share
- Define a unique share name
- Uncheck "Public" and add the user create in Step 1 or any active directory user if joined

Step 4 — Setup backup software

- In Commvault setup up a new Storage using the UNC path of your Silent Brick SecureNAS Volume
