 **These instructions are only valid for software versions up to 2.9. All software versions 3.0 and higher already contain VMWare tools - they do not have to be installed this way anymore.**

 **During the install the Head Unit will reboot and the Silent Cube services will not be available for some time**

 **If you have replation setup with two Head Units these Steps habe to be done on both Head Units**

 **The VMWare Tools Version is related to the used software version of your Silent Cube Head Unit**

- Download the Patch version for your software version

 <http://swupdate.fast-lta.net>

- User: evb
- Password: getUpdate

## Step 2 — Prepare / Check the VMWare Machine OS Settings

- Set the VMWare version to **ESXi 6.7 and higher**
- Set the Guest OS to **Linux**
- Set the Linux Version of the VMWare Host to **Other 3.X Linux System (64-Bit)**

## Step 3 — Install VMWare Tools Patch

- Click Browse and select the previously downloaded VMWare Tools version
- Click on Start the update. The system will now install the version. Click on the appearing OK button to reboot the machine.

## Step 4 — Prepare VMWare Machine

- Go to Edit Settings on the Silent Cube Head Unit on your VMWare host
- Click on "Install VMWare Tools"
- Click on "Mount VMWare Tools"

## Step 5 — Activate VMWare Tools On Head Unit

- As last step you have to click on "Install VMWare Tools" on the Head Unit.
- ⓘ If you now look on your VMWare Host you should see that the VMWare Tools are active.
